ACUTE ANKLE SPRAIN INSTRUCTION SHEET

Your ankle and foot may turn black and blue and swell, however, this is a normal response to the injury sustained. Listed below are several steps to help manage your injury. Please do not apply heat to the injured area for at least 24-48 hours.

IMMEDIATE CARE

1) **Rest** – Remain off the injured area as much as possible for the first few hours. Keep the foot and ankle elevated whenever possible.

2) **Ice** – Ice packs should be applied for 15-20 minutes about 4-5 times per day. Two hours should pass between applications. Use care when applying the ice. The area may burn slightly, turn red, and become numb – this is normal. However, if the area turns blue or numbness occurs elsewhere, remove the ice and put a towel between the ice and skin. If these symptoms persist, discontinue the use of ice.

3) **Compression** – An ace wrap should be left on the ankle at all times except when icing or when showering. At night, leave the wrap on, but loosen it so circulation continues to the toes. The ace wrap will help remove the swelling from the area. The wrap should be applied in a spiral fashion from the toes to the middle of the calf. Even tension should be applied throughout the wrap. Loosen the wrap if the toes turn blue or if feeling is lost in the toes.

4) **Elevation** – be sure to keep the injured area elevated to keep additional blood flow from the area to cause additional swelling.

The following are suggestions for care of this injury:

- Follow the above instructions.
- Schedule a complimentary orthopedic screen at an Athletico Physical Therapy center.
  - The nearest Athletico to Marian Catholic is:
    - Matteson
    - 4749 Lincoln Mall Dr. Ste 550
    - 708-283-9765
- Go to the emergency room/urgent care
- Follow up with an orthopedic physician

If there are any other questions do not hesitate to contact the Athletic Trainer.

*Better for every body.*
